John f deering middle school

PreK - \$8 to \$19.95 per month, first student (\$14.95 per month for each additional student) 9 - 12th \$30.00 per month, per student (includes 4 courses per student) Is Now Start Time! Start • Stop • Always Take a Break The transition from middle school to high school marks a very exciting time in the life of a child and a parent. But it can be scary. It's not just moving to a different school, it's a completely new environment. The start of high school can be overwhelming and confusing, and only because the buildings are physically larger and uns stranger to campus. Children leaving the middle school bubble for the high school forest not only have to deal with the demands of new teachers and academics, but also a completely different set of students, some three years older and much more mature. If a child doesn't make the transition smoothly, the transition to high school can be catastrophic -- more kids than ninth grade fail more than any other class [source: Weber]. Most school systems pave the way by implementing transition programs that can include everything from campus visits to shady students, but this is never easy. The list of the top 10 differences between middle school and high school will help you identify some of the pitfalls you might encounter as your child enters ninth grade -- for example, what will happen when your trombone-playing math master finds out that group practice conflicts with calculus? We hope you will find some advice that will often take you crazy time. Advertising Content One of the scariest things about moving from middle school to high school is the dramatic increase in school size. It's scary enough to move from three grades to a four-grade school -- and on top of that, a few middle schools from one area usually fall into a high school. I mean, four times as easily as high school kids. As the first day of ninth grade looms, the imagination of entering a completely alien (and much larger) campus and wandering in a sea of new faces can be overwhelming. Most high schools are quite careful about facilitating the transition, but it's not hard to see how children can get lost in this mix. The large student body leads to the next item in our list ... Advertising We know that high schools enroll higher than secondary schools, so we know that individual classes will also grow. Student-teacher ratios vary greatly across the country, but in general high school classes are larger than secondary school classes. It may not be much, but it makes a difference. Jumping from a 15-student class to a class of 20 kids doesn't seem like such a big deal, but it's something that makes things a little more imper personally and one-on-one with the teacher. There's definitely a lot less holding hands in high school -- older kids are expected to be more responsible. independent, so (in theory) teachers do not need much attention. And a kid who's not ready for this mission could fall through the cracks. The ad seems to spend an excessive amount of time trying to make eighth grade teachers open to their students (or trying to scare their students, but want to look at it) will have a lot more homework in high school. And they do it for a reason: there's a lot more homework in high school. Kids who aren't ready for this could be in ninth grade for the first month or so for a bad shock. The increased workload - coupled with the stress of new environments, programs, expectations, teachers and classmates - can put some children in a loop, so it's especially important for parents to be at their own games during this transition period. Advertising Eighth grade - especially the last few months - is a dizzying time for some kids. They are the oldest (and therefore the coolest) in school, and take every opportunity to address this fact on everyone they believe is under them (i.e., you know, everyone). But when it rolls in September, they quickly discover how demoralizing it can be to fall from the head of the herd to the bottom of the barrel. We just argued for these and other reasons, a lot of kids find themselves flailing in ninth grade. Some schools have tried to combat this phenomenon by separating freshmen from the crowd a little -- setting up ninth-grade academies or smaller classes to preserve that sense of middle school for a while. Advertising In most secondary schools, with a focus on community building and nurture students, children don't get much choice in what courses they take. Students can be taken to different groups based on skill level, but in general there are very few changes in courses. Sixth-grade American history, seventh grade pre-algebra, and that's it. High school is a completely new game, with endless options -- which is exciting, of course, but it can be overwhelming. And timing is always very difficult: what happens if your trombone-playing child is also a math buzz and at the same time as advanced trigonometry group work? Or if physics contradicts French? It may not be an easy response or a quick fix, but if parents, teachers, and counselors work together, they can create a balanced schedule. Advertising As academic and athletic demands increase in high school, you might think it can increase parents' participation. After all, this is a critical time in your child's life -- very soon, they fly in the coult, never to be seen again. But you'd be thinking wrong: Veli participation actually decreases during high school. One of the reasons is that high schools often don't court their attendees as much as they do in primary and secondary schools -- it's just a more practical kind of environment. Parents are also widely Contributions are not so necessary because children are older and more responsible. It's not that bad. Many studies have shown that parental participation is an important factor in their child's success. So go ahead and volunteer -- your kids may be ashamed to see you around, but it's for their own good. People in advertising often see middle school as a bubble - students are doing reading, writing and arithmetic, of course, but sometimes the process is highlighted more than the result. Children learn themselves, they're safe in their own small communities, and they don't focus much on the outside world. But things change in high school. Suddenly the goal is very clear: university. No more hanging out-- it's a real deal. Some students, to be sure, are grade-oriented from day one, so this shift in goals can be exhilarating -- finally, all this counts for something! However, it can be jarring for a child who may not be worried about all his grades. So again, it's up to you, parents -- it's your job to remind the underperforming to get on this level. Advertising Poor ninth grades. As they don't already have enough to manage, what an overwhelming new environment, with larger class size and increasing academic demands, they also have to juggle multiple new teachers. In middle school, children probably have no more than two or three different teachers a day, but high school kicks up a few notches (as it does with everything). Now, they can have six or seven teachers every day -- all with their own methods, standards, workloads, moods and unique characteristics. No wonder grades are down and drop-out rates are rising in ninth grade. So, even when you're on your child's work and grades, remember to be understanding -- this can be a tough time. 10th and 11th. Advertising Many of the changes we've discussed so far in this article have some uncertainty attached to them - the transition to high school is exciting and scary. But sports are part of high school life that can be parked squarely at the exciting point. Most middle schools have sports teams, but they don't bring school back to life like high school sports can. It's like switching focus with academics: Sure, middle school sports are fun, but it's the real deal in a high school football game. Even if your child isn't an athlete, sporting events offer many opportunities for social interaction with new classmates. Also, the taste of the school spirit never hurts -- it allows children to start a new identity, which can make the transition a little less painful. Ad You knew we were going to get to this sooner or later, didn't you? Peer pressure gives birth to his ugly head back pretty early in every child's life, but the stakes definitely rise in high school. Pressure to make drinks and drugs certainly shows some in middle school years, but children (and parents) soon notice These concerns are small potatoes compared to those lurking in high school. And it's not just about illegal substances -- clothes, eating, cheating, you tell me your name. Bowing to peer pressure can quickly derail academic careers, and this is an important factor in many school drop-outs. As always, parents need to be vigilant and, most importantly, keep their lines of communication open. To learn more about the differences between middle school and high school, see the links on the page below. Lawn mowers mow obstacles and challenges before their parents, their children, face them. HowStuffWorks talks to experts about parenting style: Bennett, Laurie J. and Mac Iver, Martha Abele.
